

OPN EXCLUSIVE:

Inflation Hits Organic Fresh Produce in Q2; Sales Increase 3.7 Percent, Volume Declines 2.8 Percent

(Monterey, CA — August 3, 2022) Higher retail prices of organic fresh produce during the second quarter of 2022 generated a 3.7 percent increase in total organic dollars but also contributed to a decline in organic volume of 2.8 percent, according to **Q2 2022 Organic Produce Performance Report** issued by the Organic Produce Network (OPN) and Category Partners.

Overall, organic fresh produce pricing increased by 6.7 percent for Q2/2022 compared to same period last year, with sales for the quarter topping \$2.4 billion. At the same time, conventional produce's average price increased by more than 9 percent compared to the same period last year, with total sales of \$18.1 billion. The Q2 2022 Organic Produce Performance Report uses Nielsen IQ syndicated data to track and report the performance of organic fresh produce—and specifically the top 20 leading organic categories.

The report suggests consumers are watching grocery spending carefully as inflation often takes its toll on higher priced items, which would include many organic fresh produce items. “Seeing a decline in organic volume for Q2 suggests food budgets are under stress in many US households,” said Tom Barnes, CEO of Category Partners. “It’s common to see budget-centric consumers trade down, substituting for lower-priced conventional items or shifting from a high-priced organic item to a cheaper organic alternative from another category.”

Barnes believes organic substitution explains why organic bananas had a particularly strong quarter in Q2. “Bananas are one of the lowest-priced organic fruits and have the smallest price spread between conventional and organic. For the quarter, while nearly every other organic fruit declined in volume, bananas increased in both dollars (+4.3 percent) and volume (+4.0 percent). So for budget-focused consumers still wanting to buy organic, bananas provided a cost-effective option. Suppliers need to be aware of shifting consumer purchase drivers and develop strategies to keep shoppers buying,” he said.

Geographically, all four regions of the US showed increases in sales and decreases in volume for the quarter. Organic performance during Q2/2022 was weakest in the Northeast, where dollars increased by a mere 0.4 percent, and volume fell by 6.1 percent. The South continues to show the most improvement year over year, and with a fairly low ACV compared to the Northeast and West, data suggests the South is poised for continued growth.

Despite the minor decline in volume, OPN Co-founder and CEO Matt Seeley is bullish on the long-term prospects for growth of organic fresh produce. “While there are likely some difficult months ahead, the long-term potential for continued organic fresh produce growth remains unchanged,” Seeley said. “Inflation and supply chain challenges have impacted pricing in the short term; however, organic fresh produce will remain an important component of weekly food shopping as consumers look for healthy, safe, and nutritious products for their families.”

In addition to bananas having an exceptional quarter, the berry category (strawberries, blueberries, raspberries, and blackberries) led the way in dollar sales, topping \$430 million. Organic blackberries

generated the largest percent increase in dollars, gaining 27.6 percent year over year, followed by tomatoes, onions, and raspberries.

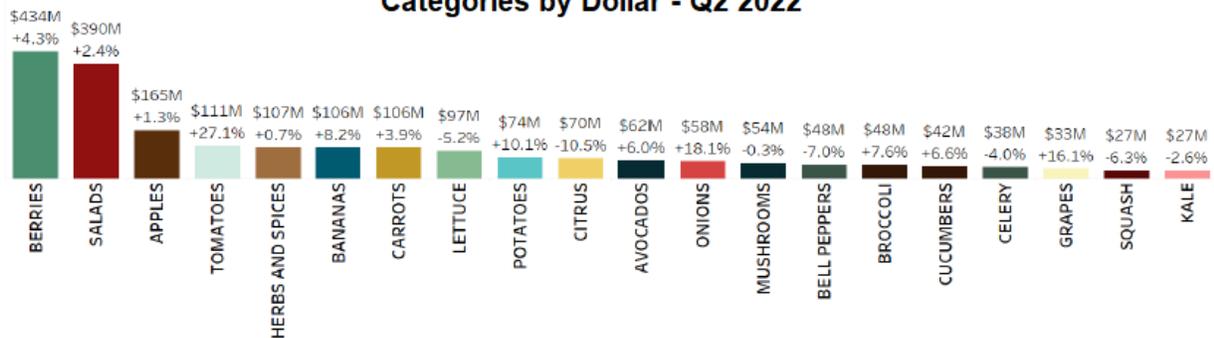

Conversely, blueberries posted the largest decline in dollars, with bell peppers and squash also showing noticeable declines. Berries and salads continue to be the top organic produce categories by total sales, responsible for nearly 40 percent of all organic produce dollars.

The **Q2 2022 Organic Produce Performance Report** covers total food sales in the US, including all outlets (i.e. supermarkets, mass merchandisers, club stores, dollar stores, convenience stores, and military commissaries), over the months of April, May, and June of this year. The full **Q2 2022 Organic Produce Performance Report** is available on the Organic Produce Network website [here](https://www.organicproducenetwork.com).

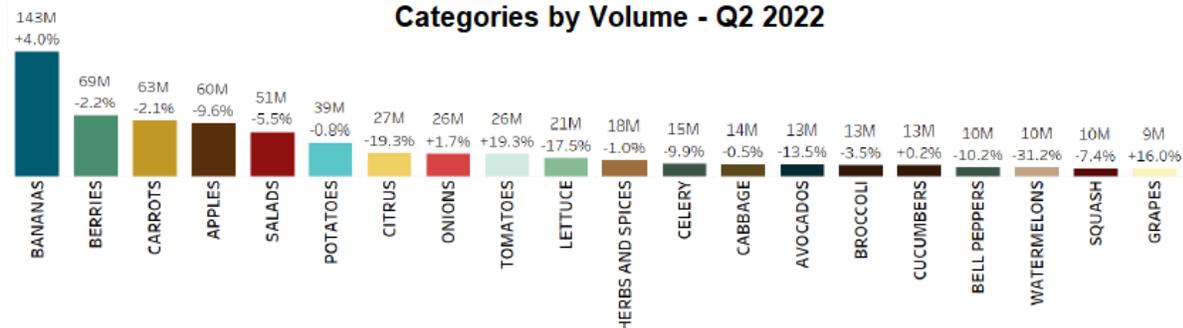

OPN is a marketing organization that serves as the go-to resource for the organic fresh produce industry. The company's mission is to inform and educate through a strong digital presence with an emphasis on original content and complemented by engaging live events that bring together various components of the organic produce community. OPN's target audience includes organic producers, handlers, distributors, processors, wholesalers, foodservice operators, and retailers.
